

Hydraulic In-Ground Lifts for Buses - worldwide !

For more than 80 years our family owned company has been working in the area of lifting technology. Over the decades we have strengthened and developed our expertise. Today we develop and manufacture lifting equipment distinguished by a high level of reliability and easy maintenance. Quality and innovations are driving our company philosophy.

Our product line for buses includes also lifting equipment for wash bays, paint booths and repair lifts for general maintenance in the workshop.

All JAB-Lifts are available in an explosion-proof version, specially for the repair of CNG or LPG powered buses. JAB-products have proven their quality and long-term operational reliability in both assembly line and paint booth applications.

Our service includes the provision of drawings for foundation and installation. We also provide consulting and support to select the correct lift for present and future vehicle requirement.

There is no bus we can't lift! From the minibus up to the double articulated bus - we have a solution that will work!

JAB-Lifts are also available in a telescopic version with a reduced installation depth of approx. 1.500 mm (60 inches).

JAB-Characteristics:

- fully hydraulic drive
- low motor capacity required
- lowest maintenance level
- electronic synchronization device and mechanical safety bars acc. EN1493
- Optional pre-selectable lifting positions
- Optional lifting rams moveable in fully recessed version
- All lifts are approved by ALI and certified by ETL-Intertek acc. ANSI/ALI/UL and CAN/CSA Standards
